All Chevrolet, GMC and Cadillac models are imported into Europe by AEC Specialty Vehicles without the Super Cruise function activated. The cars could be equipped with the visible hardware of the Super Cruise function (steering wheel, light bar and switches), but the features will not work as this technology is not compatible with European roads. Customers may also get ad hoc messages in-cluster stating the need for an OnStar subscription to make the Super Cruise function available. However, OnStar is not active for these vehicles, making it impossible to access the subscription needed to enable the Super Cruise functionality. Every time ignition is cycled, the system will look for OnStar connection, asking the customer to dismiss this information.
